## Introduction

Digitization has transformed our world. How we live, learn, play and pay has all changed and banks are at the forefront of that change offering banking services online. Banks have been deploying the security measures needed to combat the threats. Gone are the days when organisations used to deploy firewalls and IDS to ensure network security. The ever-increasing threats both from inside and outside are forcing the organisations to look beyond firewall and IDS.

Network security aims at allowing authorized users alone gain access to network resources, and block malicious actors from carrying out exploits and threats. Network Security achieves this by combining multiple layers of defense at the edge and in the network.

## Objective

- ★ To bring awareness about Network Security.
- ★ To Discuss in depth the threats and the security measures that can be deployed across all the layers of TCP/IP stack.
