### Introduction

Banks have increasingly become targets for cyber attacks as the criminals eye for financial gain. The attackers target banks infrastructure, and more specifically the website, which is facing the customers. Hence, over the years websites have become an easy target for the cyber criminals. There are a series of common vulnerabilities for websites like injection attacks, XSS, CSRF as listed in OWASP top vulnerabilities. Level of sophistication of the attacks has also increased. DDoS is also envisaged as an emerging threat for banks. Recent cases also refer to how ransomwares are distributed through banks' websites. Hence, securing the website is always a major concern for the banks.

### Objective

The objective of this program is to enlighten the participants with the knowledge of website security. In turn, it will help banks to strengthen the security of their websites. The three-day program aims to cover several aspects of website security. It will also help the participants in conducting periodic VAPT for their banks' websites.

### Contents

The program tends to cover the following topics:

- \* Securing Website through HTTPS
- \* Defence Against OWASP Top Vulnerabilities
- \* Website Analytics
- \* VAPT

### Who Can Participate?

Staffs from IT department and/or CISO office of banks can attend the program.

### End Use

The program will strengthen the participants in website security. They will be able to deploy appropriate technologies and strategies to counter threats against websites.
