VIDEO ANALYTICS IN BANKING & FINANCE

February 14 – 17, 2022

Introduction

The availability of huge dataset and high performance computers lead the light to data analytics. Among the various data sources which contribute to terabytes of big data, video surveillance data is having much social relevance in today's world. For banks, video surveillance is used for monitoring corporate headquarters, individual branches, critical infrastructure buildings, ATMs, and parking lots. Continuous manual monitoring of hours of footage is difficult and tiresome. Artificial intelligence-backed video analysis software enables banks to overcome these and other challenges. Analysis of surveillance videos involves a series of modules like object recognition, action recognition and classification of identified actions into categories like anomalous or normal.

The aggregated video data across the branches might help in understanding the broader behavioural trends in order to optimize customer service, create more secure building layouts, generate better security protocols, and many more. For the financial institutions, these capabilities can save hundreds of thousands of man-hours each year and considerably improve loss prevention.

Objective

To demystify the basic concepts of Video analytics and its modules, discuss multiple use cases and success stories, and provide updates of new technological trends across other industries.

Contents

- Introduction to Video Analytics
- Basic concepts and latest advancements in different modules such as object recognition, action recognition, etc.
- Use cases of video analytics in Banking and Finance sector
- Demo with open-source tools

Mode of Teaching

Online teaching plus learning inputs through reading material, videos, webinars, assignments, quizzes, online interactions and clarifications. Each e-Programme will have four live webinars and course material will be made available in advance for study.
