## **BIG DATA AND CLOUD**

**May 24 – 27, 2022**

---

### Introduction

Big data refers to high volume, high velocity, and/or high variety information assets, due to its high volume and complexity, it becomes difficult to process big data using traditional database management tools. Hence, new platforms, frameworks and methodologies are required for big data storage, management, data safety and data analytics. Cloud is a best option for storing and processing big data, because the cloud has capabilities of storing big data and processing high volume of user access requests in an efficient way. Cloud also enables computing resources to be provided as IT services in a pay-as-you-go fashion with high efficiency and effectiveness. When hosting big data into the cloud, security and privacy are major concerns, which also need to be addressed in the cloud.

Therefore, it is important to understand the integration of Big data and cloud computing technologies, what impacts it will have on banking sector and what are the challenges and emerging solutions to address these challenges.

### Objectives

- Understand how Big Data and cloud technologies useful for banking sector
- Understand big data analytics using cloud platform
- Understand security and privacy challenges and solutions for Big Data in the cloud

### Contents

- Introduction to Big data
- Architecture of Big data
- Hadoop Framework
- Hadoop Ecosystem
- Overview of Cloud Computing
- Cloud delivery and deployment models
- Cloud Infrastructure for Big Data
- Big data analytics in Cloud
- Big Data Security and privacy
